PROPORTION OF STAFF RECEIVING A BONUS PAYMENT

Proportion of men receiving a bonus payment

Proportion of women receiving a bonus payment

About Marcus and Marcus

Marcus and Marcus are a care provider based in North London specialising in providing Supported Living Services to people with a learning disability and/ or are Autistic. We currently provide support for over 110 people and employ 480 staff.

Gender Pay Gap

Marcus and Marcus does have a Gender Pay Gap – the Mean Pay Gap has increased from 4.9% to 5.4% in 2022. Whilst the Median Pay Gap was 0.56% in 2021, there was no difference in 2022.

These figures reflect the higher salaries earned by senior members of the management structure which is predominantly male although our most senior and highest earning manager is female and an additional management post that was created in 2022 is held by a female staff also.

The increase in the Pay Gap is largely attributed to restructuring of the management team and increased numbers of care and support managers, the majority of post holders at this level are male.

Another contributing factor is that, in line with funding arrangements, the company pays Support Workers based on Service User's needs. At Marcus and Marcus, staff can earn more per hour for working with highly complex and challenging service users where additional skills and knowledge are essential to fulfil the role. Our staff are recruited to work specifically with the client and our more complex cases often attract more male applicants and so higher levels of male staff recruited into the role.

Pay Quartiles

The proportion of male and female employees are split into quartile bands based on their Hourly Pay. The banding illustrates that there is a consistent gap in all quartiles. Although there appears to be a large gap, the percentages are consistent with the composition of staff within the Company which is 65% male and 35% female. This composition is consistent with the needs of our Service Users, which is 77% male and 23% female. Generally male Service Users prefer to be supported by male staff, and female Service Users prefer to be supported by female staff.
